**Potential competing interests:** No potential competing interests to declare.

The article introduces the utilization of the bootstrap method for variable selection in a regression model. However, it does not contribute any novel advancements to the method. Here are some points that can be improved:

- Enhance the grammatical structure and coherence throughout the article.
- Expand both the Abstract and the Conclusions sections by incorporating the obtained results. Provide a more comprehensive summary of the findings.
- Merge Tables 1 and 2 to eliminate redundancy and consider incorporating graphical representations to enhance data visualization.
- Instead of mere references, include a presentation of the Models obtained, this will provide a more insightful understanding of the results.
