STROBE guidelines will be used for the observational study. Write the entire manuscript as per STROBE guidelines. Kindly check the Equator network for STROBE guidelines. Results are too descriptive. Perform statistical analysis by exploring the data for each response. The data can be presented as mean, median, and proportion by framing the descriptive tables. Why mention a dummy name? Is there any significance in stating the name or even a dummy name? Make the results section more elaborative by using tables and by using descriptive and inferential statistics. How exactly was the thematic analysis done? Can the findings of this study be generalized?
