Potential competing interests: No potential competing interests to declare.

- The abstract is short and the author does not explain the main purpose of his article or highlight the main results of his study.
- The Introduction is so general and the author does not announce the plan of the paper at the end of introduction neither the contribution of their paper compared to current understanding of the subject.
- This paper pointed out "the decision guidance" rather than "the decision-making" of individuals. In fact, the author refers to the use of neuroscience for acting on certain areas of the brain to guide individuals' decisions such as by the use of rewards or repressions.
- Interesting subject, but the author does not specify his own contribution and the innovation of his work.
