Potential competing interests: No potential competing interests to declare.

The review is constructive and focusing on the targeted aim clearly. The information is basic yet clarifies the immunology aspects of host factors in respect to vaccination.

Kindly consider the following suggestions:

1. Sentences: "However, there are reports of survival among aging patients and those with underlying conditions." and "However, records show that the new viral strain, SARS-CoV-2 (O-Micron) and many others still cause a similar ratio of asymptomatic cases, severe cases and mortality as the original strain of SARS- CoV-2."- Add citations
2. A figure that can detail the explained viral immunity might add value to the presentation of the manuscript.
