Nanoscale Coordination Polymer Nanoparticles CPI-100

National Cancer Institute

Source

National Cancer Institute. *Nanoscale Coordination Polymer Nanoparticles CPI-100*. NCI Thesaurus. Code C157499.

A preparation of self-assembled core-shell nanoscale coordination polymer (NCP) nanoparticles containing an as of yet undisclosed payload with potential immunostimulating and antineoplastic activities. Upon intravenous administration, NCP nanoparticle formulation CPI-100 delivers its payload to tumor cells, which may lead to enhanced immune-mediated killing and regression of tumor cells.
