In this manuscript entitled "Coconut flower - market potential and future forecast in the Coconut Land (Bến Tre), Vietnam" by Dai-Long Ngo-Hoang. In this study, author outlines the industrial development of coconut flower nectar in Vietnam in terms of nutritional value, collection and processing. This article needs further revision.

The comments and suggestions are listed as follows.

1. Abstract is a miniature of an article and should contain most of the content described in the text. The description of the abstract in this paper is too simple and it is suggested to enrich the content of the abstract.
2. Some references are cited in this paper, but they are not marked in the manuscript.
3. The description of the beneficial components in coconut nectar is too brief and does not adequately describe the effects of the beneficial components in coconut nectar on human health.
4. The structure and logic of the whole text is a bit chaotic, lacking transitional phrases to carry on the next.
5. Most of the text is describing the current situation of the coconut nectar industry, but there is too little description of the recommendations for the industry, so it is recommended to enrich it.
