

# Review of: "[Commentary] #BetterPoster: The gateway to accessible science"

Andreas Sackl

**Potential competing interests:** The author(s) declared that no potential competing interests exist.

This article raises the awareness of a so far neglected accessibility issue in the scientific community and it provides some clear take-aways how to reduce barriers from posters. Would be great to have more information about how to create accessible posters. Of course, a PowerPoint template is provided, however, a more detailed explanation would be beneficial. Furthermore, an empirical evaluation with low vision users would be also great to create empirically-validated findings.
