I would like to point out that the research topic is interesting. I have some observations about:

*The research methodology is not clear and is close to more subjectivity. It needs to follow a scientific approach to obtain scientific results

*The research needs some abbreviation, especially in the topics at the beginning of the research

*The research needs a chart that explains the structure of the research in general

*The research needs a table of a theoretical framework for the research indicators that were found from the studies

With regards
