Potential competing interests: No potential competing interests to declare.

The topic is interesting, and it is a common problem elsewhere in the world. However, the Author does not give good attention to all contents of the topic: for example, 1) the introduction part is very short and doesn't describe the topic in a wide range; 2) the methods are common, and they are similar to lecture material; 3) the result part simply discusses the return periods resulted by simple substitution of the probability-return period relation.

Overall, this paper lacks more information to be considered in a research article.

So, I decided: Reject
