Review of: "Species delimitation and mitonuclear discordance within a species complex of biting midges"

Liang-Liang Yue

Potential competing interests: The author(s) declared that no potential competing interests exist.

This is a well-recognized paper, in which the authors detailed described the phylogeographic pattern of the closely related species. The evidence is solid enough.

Here, we know these species are the potential carriers of many diseases. How about detecting their dynamics and analyzing their relationships with the disease. You know the CDC may have enough data with temporal and spatial information.
