Potential competing interests: No potential competing interests to declare.

1. The author needs to discuss more recent studies that focus on the objective of the research through comparison and evaluation of the determinants of those studies and their results, which gives the reader a clear vision of the gap that those studies have not addressed and that is not covered by this study.
2. The pieces of literature must be in order in the text, and they should not be treated as elements in a sentence.
3. The abstract needs to say why the work is of interest and what the innovation is.
4. I suggest that conclusions that contain the important findings of the work must be extended to all results and discussed briefly.
5. Remark 3.4, how was it numbered as 3.4.? (or) Remark 3.4, how did it get numbered as 3.4.? (depending on context)
6. The paper should be reviewed for grammatical errors.
7. **Overall Evaluation:** Accept.
