Thank you for the opportunity to review this Qeios article. Congratulations to the authors for their efforts in completing this study. This is a simple but important study conducted in Ethiopia.

General comments

The authors need to revise some sentences throughout their paper.

Specific comments

This study applies a simple conceptual framework, focusing on the impacts of planting and/or growing trees on climate change. This is acceptable. However, it will be useful to include additional information about how many trees have been planted in this region. Since the quantitative data only provide results on planting and growing plants, further elaboration on the qualitative data is important to support the findings of the quantitative data. For example, how does planting and growing trees help resolve the challenges encountered by the Ethiopian people in responding to climate change impacts?
