The article "Digital Literacy in People with Disabilities: An Overview and Narrative Review" covers the obstacles and potential of digital literacy for disabled people. It discusses digital accessibility, assistive technology, and digital literacy initiatives. The review carefully evaluates disability obstacles to digital platforms and possible remedies. It also addresses digital literacy's evolution and aspects, providing insights and future research and practice approaches.

The review is well-structured and clearly written, effectively communicating complex ideas about the intersection of digital literacy and disability.

More information is needed about the keywords included in the engine search. Furthermore, the search engines and databases searched should be clearly stated. Adding a PRISMA Flow Diagram would be useful.

In the Method section, it is written that "Statistical analysis using SPSS/PC (Pallant, 2020) and Cohen's guidelines were employed to analyze effect sizes (Cohen, 1992)." However, no effect size is reported in the manuscript.
