In the current study, there is evidence supporting the Hepatoprotective Effect of the Ursolic Acid-Oleanolic Acid Mixture Administered Intragastrically in Mice with Liver Damage Induced by Anti-TB Drugs. After reading the manuscript, it was found to be interesting and interactive to correlate. The important studies on Liver Damage Induced by Anti-TB Drugs that the authors emphasized deserve to be published with major revision.

Reviewers' comments:

The following concerns with this manuscript need to be addressed:

1. In abstract objective section, author should clearly clarify the aim of study.
2. In materials and methods section of abstract, total number of mice and doses of RIF/INH/PZA should be mentioned.
3. Please note that abbreviations should be defined in abstract, main text, figures at the first occurrence. Please would you check that your paper has been correctly set and revise it accordingly.
4. The conclusion in the introduction section should be revised. The significance of this study should be emphasized.
5. In studies involving animals, the **method of euthanasia** must be disclosed. Additionally, if anesthesia is involved, clarification regarding the specific type of anesthetic used is required.
6. In vivo assay section author should mention total numbers of animal and numbers of animal used per group.
7. Quantification of parameters of oxidative stress section, the methodological description is too simple, and common experimental steps can be omitted. Author should explain methods in detail.
8. In result, BWG test, please explain why Two-way ANOVA is used for statistical analysis.
9. Conclusion is a separate subchapter that is juxtaposed with the discussion; the significance of this study should be emphasized in conclusion.
10. The manuscript requires grammatical revision and punctuation rectification.
