

Peer Review

Review of: "Upper Mid-Band Spectrum for 6G: Vision, Opportunity and Challenges"

Insha Ishteyaq¹

1. Islamic University of Science and Technology, Awantipur, India

The title of the review paper is quite interesting for the research. However, it needs some thorough changes:

1. The abstract needs to be revisited to make it more precise and technical.
2. The captions of the figures should be written properly.
3. The paper lacks the number of figures that can be incorporated, such as those related to massive MIMO, arrays, etc.
4. The review paper should concentrate more on comparison tables and technicality.
5. References need to be revisited.
