# Classic mycosis fungoides

INSERM

## Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Classic mycosis fungoides. ORPHA:2584*

Classical mycosis fungoides is the most common type of mycosis fungoides (MF; see this term), a form of cutaneous T-cell lymphoma, and is characterized by slow progression from patches to more infiltrated plaques and eventually to tumors.
