**Potential competing interests:** No potential competing interests to declare.

The team of authors have done a fairly impressive job which provides valuable insight into the disease status of Medical Students during the COVID 19 global health crisis. It is important to note here that such studies are of utmost importance considering the Public Health perspective.

If possible could the authors add the dates of the study. It just mentions the study was carried out for 6 months but which year and month. A line or two about it would add further quality to the study. This will also be important for us to see which wave and what dates are we particularly talking about in this study. Update the methodology in the Abstract accordingly.

Furthermore, this study also highlights the use of online tools like google forms etc for the data collection purposes.
