**Potential competing interests:** No potential competing interests to declare.

The article deserves to be published, however with some insights specifically concerning the application of the neuroeconomic model in the Russian reality, with particular reference to the mental attitudes of the Russian population. While the section on the importance of neuroeconomics is satisfactory, the behavioral attitude of the Russians needs to be justified in a more comprehensive way. The author is asked to highlight aspirations and plans for the future of the Russian people with an appropriate bibliography, taking into account the lifestyle, values and aspirations, also in the light of the negative changes resulting from the conflict with Ukraine.
