Potential competing interests: No potential competing interests to declare.

**Clarity and Precision:** The manuscript lacks clarity and requires more precise clarification. Ambiguous language and concepts hinder understanding. Clear definitions and explanations are needed throughout the manuscript to enhance reader comprehension. Consider revising sentences or adding specific examples to illustrate key points.

**Nomenclature:** The absence of a nomenclature section is a notable omission. Introducing a nomenclature section can greatly benefit readers, especially when dealing with technical terms or acronyms. Provide clear definitions and explanations for specialized terminology, ensuring that readers can easily grasp the meaning of key terms as they progress through the manuscript.

**Research Goal and Details:** The research goal is not clearly articulated, and additional details are needed to provide a comprehensive understanding. Begin the manuscript with a concise statement of the research goal to guide readers and set the context for subsequent sections. Expand on specific aspects of the research, detailing the methodologies employed and offering a more in-depth explanation of how each contributes to achieving the stated objective.

**Results:** The results section lacks sufficient detail, hampering the interpretation and evaluation of findings. Specify the metrics, methodologies, and any statistical analyses employed. Moreover, clarify the distinctions between a hospital and other buildings within the research scope. Elaborate on why a hospital was chosen as the model, addressing its unique features in relation to the research objectives. This additional context is crucial for readers to appreciate the significance of the study and its applicability.

**Rationale for Choosing Hospital as a Model:** Provide a robust rationale for selecting a hospital as a model for the research. Explain how the distinctive characteristics of a hospital setting align with the research objectives. This explanation will enhance the credibility and relevance of the study. Emphasize the unique aspects of a hospital compared to other buildings within the research scope, reinforcing why it serves as an apt model.

In summary, addressing these concerns will significantly improve the manuscript's clarity and depth. Incorporating a nomenclature section, clearly stating the research goal, providing detailed results, and justifying the choice of a hospital as a model will enhance the overall quality and impact of the research.
