

Review of: "Quantile regression for identifying latent structures in COVID-19 pandemic – Examples from Nepal"

Khalid Khan

Potential competing interests: No potential competing interests to declare.

i have read your article. to some extent your manuscript is suitable for publication. However, before publication it needs some improvements in the following ways.

1. the abstract has shown the results clearly and look lengthy.
2. the introduction section lacks the innovations and contributions.
3. As the contemporary literature review has numerous studies about corvids and their effects, however, i do not find any research gap and the relevant reference supporting your arguments. i suggest you some articles for references.

4. the data section needs to be more organized with source of data
5. How much the results are valid? need to be supported by the relevant references.
6. lack of policy implications. the author needs to revise in terms of policy recommendations.
