**Potential competing interests:** No potential competing interests to declare.

The author presents a quickly charging capacitor from its history and general principles. After reading this manuscript, it is more like a popular science article rather than a research paper. Also, the paper presents lots of advantages of the capacitor but disregards the limitations of the capacitor, such as being bulky and heavy. Thus, I suggest the authors could present the manuscript from a more objective perspective, and the discussions part should be strengthened. It would be best if the authors presented a more in-depth discussion of the differences and creativity surrounding nanogate capacitors.
