Review of: "Reversible transliteration of the historical Ukrainian alphabets in the context of heritage preservation and linguistic technologies development"

Abdellatif Jarjar

Potential competing interests: No potential competing interests to declare.

In this article, the authors try to analyze the alphabet used for the Ukrainian language during its evolution over time to propose a system of their simple-corresponding transliteration (bijection) in the Latin script which has the property of reversibility and obeys the Ukrainian Transliteration Standard and gives compatibility between languages already transcribed.

The authors have done a high level of work, well structured, well written, easy to assimilate, and requires great encouragement from us. Nevertheless, some remarks can be raised and corrected:

- Several references are cited.
- Authors should talk about the development of the Ukrainian language throughout history.
- See if the Ukrainian dialect is uniform across the country.
- Different Ukrainian dialects.
- Give the register of the former Ukraine.
- In the last section, the authors could have used tables to clarify the TRANSLITERATION, and its reciprocal table.
