Review of: "Herbal Treatments and Their Impact on Male Fertility: A Comprehensive Review"

Gisou Erabi¹

1. Urmia University of Medical Sciences, Iran, Islamic Republic of

Dear researchers,

Initially, I want to thank you for the great topic you have chosen. Secondly, the article has very complete and accurate parts of different sections of a review article, and I was searching to check and find flaws, but I was unable to!

The introduction, Methods, Discussion, Tables, Figures... all were well done. Hence, there are some minor changes to be made:

1. Please pay attention to all abbreviations; all of them must include the full form.
2. There may be some parts that need some changes; thus, a narrative English reviewer is suggested to check for grammatical errors.
3. The spacing and the point at the beginning of this paragraph must be edited and removed due to writing rules: “. Studies have demonstrated that A. iva exhibits antioxidant, anti-inflammatory, and antibacterial effects. Additionally, it has been investigated for its efficacy in treating neurological disorders and enhancing cognitive function^[62].”

Sincerely,

Declarations
