**Potential competing interests:** No potential competing interests to declare.

The authors propose a review of prompting strategies of GPT-like models. Overall, they summarize approaches and strategies used in recent scientific papers on the topic. The article is well-organized and easy to read and understand. However, it has several weaknesses:

- The techniques reported should be better explored, grouped, and compared.
- The article should also report the experimental results of the proposed approaches.
- No "take home" messages are given, which would be helpful in summarizing the reported considerations.
