Cardiac diverticulum

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Cardiac diverticulum. ORPHA:1686*

Congenital cardiac diverticulum (CCD) is a very rare congenital malformation characterized by a muscular appendix emerging from the left ventricular apex, rarely from the right ventricle or from both chambers, with clinical manifestations ranging from asymptomatic to life-threatening hemodynamic collapse.
