Dear author, first of all, congratulations on your initiative in writing the review. I have some suggestions in addition to those already mentioned by other colleagues:

1. Add a topic describing the methodology used for your review. What databases were used, when the review was carried out, etc.
2. Add photos of botanical species to the text.
3. Standardize chemical structures using a single design program. Specify R4 and R5 in the Aglycone structure.
4. The name "Gram" must always be written with the initial in confidence.
5. Replace reference 3 (Wikipedia) with references to scientific articles.
