Potential competing interests: No potential competing interests to declare.

Economic growth is affected by many factors. For Pakistan, one of the factors is the use of energy such as oil and gas. Other factors include exports. The labor market is another important factor. We can take labor strikes as one variable. I suggest including those factors that impact economic growth.

In the article, authors use many abbreviations. Please write the meanings of the abbreviations in the appendix.

Furthermore, elaborate on what EViews is.

Are there control variables that impact GDP? Search on it and include those variables in the regression equation.

In equation 9, authors have mentioned likelihood. Please explain what likelihood is and why it is important in this article.

Overall, the paper is good.
