Thank you for sharing this interesting manuscript. It is well written. I have minor suggestions (as other reviewers also mentioned) as below;

- i) Its better to have more rationale / justification of the study in that site (in background - why it is necessary to carry out the study there?)
- ii) I would suggest to add the data analysis after scoring, and also write about ethical aspects (Did the authors/researchers get assent from parents?)
- iii) I would suggest to add the limitations (in the discussion part) for better interpret/generalize the study.
