Benign Pineal Region Neoplasm

National Cancer Institute

Source

National Cancer Institute. *Benign Pineal Region Neoplasm*. NCI Thesaurus. Code C3631.

A benign growth of the cells that comprise the pineal gland. Despite benign histology, symptoms can be produced due to the location: increased intracranial pressure, endocrine abnormalities, cerebellar and/or brainstem compression. The latter can produce a constellation of symptoms known as Parinaud's syndrome.
