Review of Paper Titled

"Investment Through IPO in Cuttack City of Odisha: Trends & Perception Analysis"

The entire research paper is simple and easy to understand. In the abstract, the time-frame of the study should be mentioned. The abstract can be made more systematic. The review of literature could be made more comprehensive and needs to be substantial in order to support the study. Past literature on IPOs and their development in India could be added along with comparison with a few global cities. There is no section on how the data was collected and what sampling technique was utilized. There is no justification given to the selection of 96 respondents and how is it an adequate sample size or why was the city of Cuttack selected? In the section three of results, the (collected) data is represented in both table and graph format, which is not required - either stick to tables or graphs. In the section four of variable analysis, there has to be a reasoning as to why the risk apatite of investors is low in the selected city or state. The regression model needs some revision and clarification in terms of its explanation. What is good about the paper is that, it highlights some investors insights and factors (such as profits, rate of return and refund from non-allotment) affecting the investments in IPO. Please check for grammatical errors and smaller sentence formation.
