Dear Author

Let us start with the abstract, which is confined to the surgery only without a hint of your results regarding telemedicine.

You need to change it

The introduction was so long and needs to be summarized. The laws mentioned should declare the instructions or application method of telemedicine.

Please identify the year of your work (start and end)

You should mention the causes of withdrawal of some of your patients (108 you mention at the beginning, then 82)

The sample was from the era of COVID-19; why do you not apply your work to a new sample? Is it forbidden by law, is it dangerous, ...etc

What are the causes of satisfaction and dissatisfaction of the patients

Is your conclusion or recommendation regarding using telemedicine in your specialty from the satisfaction of the patients?

What is the ethical and medicolegal impact in your cases?

Your references were about your surgery; how about references talking about telemedicine and its impact on medicine
