Potential competing interests: No potential competing interests to declare.

The author highlighted constraints and key conditions for successful implementation of Integrated Watershed Management (IWSM) in the context of semiarid regions. The paper qualifies the title and scope of the study; however, this manuscript is not ready for publication yet; there are some serious issues that the authors need to address before the manuscript can be considered for publication. Below, I listed some major weakness points that need to be addressed.

- \* The abbreviation must be introduced the first time it is used in the paper, e.g., GDP, N, P, K, S, etc.
- \* The abstract must be rewritten and improved; it does not provide a good general overview of the manuscript and should include objectives, methods/analysis, findings, and novelty/improvement.
- \* It is suggested to include specific examples or case studies that exemplify the challenges and potential solutions associated with integrated watershed management in such arid regions.
- \* Carefully check that all references are accurate; some references cited in the text are missing or incorrectly reported in the reference list (e.g., Suhas et al., 2011)
