

Review of: "Epilepsy surgery in tuberous sclerosis: An overview of neurosurgical concerns in a low-income country"

Bruno Costa¹

¹ Santa Casa de Belo Horizonte

Potential competing interests: The author(s) declared that no potential competing interests exist.

The article is relevant, it shows the experience with the early treatment of tubers with good control of epilepsy.

A revision in writing is imperative to improve the comprehension of the text.

It would be good to include some pre- and post-surgical MRI images to exemplify the cases.

Sometimes the text is a little confusing.

Authors should separate information on the treatment of SGCA, which are not the objective of the work, from epileptic tubers.

The article could be much better with a review.

In introduction we have: **“A growing body of evidence indicates that early seizure control may have an adverse effect on cognitive development and social adjustment of patients with Tuberous sclerosis complex.”** I think the meaning is the opposite.

SGCA is mixed with SEGA. Define the correct abbreviation.

In Material and Methods section, What means **“All in all”**?
