Potential competing interests: No potential competing interests to declare.

The manuscript generally flows well and the results are described and discussed quite comprehensively, making interesting reading. However, there some aspects of the manuscript that require correcting as follows:

1. There are numerous grammatical errors throughout the manuscript that need correcting by a competent writer of English.
2. please state your objective in clear sentence
3. at the material and methods section; Histological analysis, please mention which organ and the methodology at this subheading
4. please provide reference for the Statistical analysis
5. on which basis you mentioned that The best dose was 10 mg/kg?
6. i think the discussion section needs to be in more details
