Tick-Borne Relapsing Fever

National Cancer Institute

Source

National Cancer Institute. *Tick-Borne Relapsing Fever*. NCI Thesaurus. Code C34976.

An infection that is caused by certain species of *Rickettsia* or *Borrelia*, which are transmitted to humans from infected ticks; it is characterized by sudden fever, chills, headaches, myalgia, arthralgia, nausea, and possibly a rash. Symptoms usually persist for two to nine days, then disappear, with recurrence after several weeks if the patient remains untreated.
