## General comment

Some points need to be significantly improved before the definitive publication.

## Detail Comment

- The author should elaborate on this compilation, taking into account the whole, not just a region in the world.
- "The studies reporting the concentrations of some chemical contaminants, ..... the human exposure to these contaminants through the diet, were also reviewed". You have given a single reference to reported studies. Please cite this research "Environment Sci Pollut Res 27, 13902–13914 (2020)".
- Should be added to the country list in countries in Europe and America.
- The conclusion section should be technically improved a little more. Maybe some statements from the results and discussion section can be taken here.
- I would recommend doing professional language editing to polish some parts of the manuscript.
