Review of: "Exploring Emerging Adulthood and Adverse Childhood Experiences' Effect on Psychosocial Well-Being"

Michelle Vianna Goliath¹

1. Psychology, Universidade Federal de Juiz de Fora, Brazil

The article brings up a very important topic and seems to treat the participants with the highest ethical care, by running their transcripts and interpretations through them every step of the way, up until referring fragile participants to therapy sessions if they found it needed. The method and framework are all very clear, but I missed the disclosure of the questions asked to the participants. Another observation is that the study seems to aim to analyze a lot of topics and hence is unable to dive deeper into all of them. It would also be interesting if the number of participants were higher. Overall, a good research presentation.
