Dear authors,

The idea is interesting; however, the execution is not adequate. The following should be considered:

Comment/suggestion 1: Methodology has to be expanded. Include sample/data source, data analysis tools. How did you acquire results? Explain each phase of the study. Address potential biases and how you overcame them.

Comment/suggestion 2: The results could include some tables or some kind of overview structure.

Comment/suggestion 3: Additional studies in this domain could be addressed and discussed in the Discussion section.

Kind regards,
