

# Review of: "Improving the Integration of Epidemiological Data Into Human Health Risk Assessment: What Risk Assessors Told Us They Want"

Surendran Sangamithra

Potential competing interests: No potential competing interests to declare.

The study has not stated the aim clearly. A comprehensive list of the questionnaires used could have been added. The sample size calculation is ambiguous. The external validity of this study is very low. Kindly try redoing the study with a higher sample size based on the results of the current study.
