Dear authors thank you very much for your great manuscript. Some suggestions to further strengthen the report:

- Provide more specifics on the patient's dysmenorrhea symptoms - was it cyclical or constant, what made it concerning enough for imaging?
- Give reference ranges for CA125 and platelet counts at the institution.
- Were coagulation studies like PT, PTT, fibrinogen level done to help diagnosis DIC? If so, report the results.
- Clarify what frontline chemotherapy regimen the patient was discharged on.
- Carefully proofread the report - there are a few typos and awkward phrases that should be corrected.

Overall this is a well-written, concise case report. Best
