The paper provides a helpful guide to the use of ChatGPT in various domains related to prompting. Overall, this paper offers valuable insights into ChatGPT and its applications. However, there are some areas that could be improved:

1. The motivation and contribution of this paper require further elaboration to provide readers with a better understanding of the significance of this research.

2. While Section 3 discusses improving prompt tactics, the suggestions for enhancing ChatGPT performance using prompts are unclear. The authors could provide some examples which can show the effects of different prompts on the same task to better illustrate their points.

3. Section 4 attempts to uncover the Blackbox mechanism of ChatGPT and summarize related materials. However, the title "mind-to-mind talking" does not accurately reflect the section's content, leading to confusion for readers. The authors should consider a more appropriate title that clearly conveys the focus of this section.

4. Including related tools to help users build ChatGPT prompts would enhance the practical value of this paper.
