**Potential competing interests:** No potential competing interests to declare.

The manuscript is about dredging's impact on fisheries and shorelines. The methodology of the manuscript is not suitable to show the effect of dredging on fisheries. In addition, it is not possible to explain the effect of dredging on fisheries with the results obtained. First of all, in order to see the effect of dredging on fisheries, it is necessary to make the necessary comparisons by sampling the areas affected by dredging and the areas that are not affected at all. There are many studies in the literature on the subject, and it is recommended that they be examined.

Consequently, the study's methodology is deficient and is not suitable for publication.
