**Potential competing interests:** No potential competing interests to declare.

The topic of the study is informative, important, and applicable. The research focused on carbon emissions reduction strategies. Such a novel idea, in my opinion, would be necessary for any measurement that will be taken to lessen and adapt to the effects of climate change. But the ways in which the study was carried out have some limitations. The abstract or mini-manuscript of the study does not adequately represent the research and needs minor revision accordingly. The abstract needs to include the following points: a problem, an objective, methods, findings, and policy implications. Despite the core idea being good, some of it is too long and difficult to understand. It needs to revise such sentences. The methods are not clear. Generally, the whole document needs major revisions accordingly.
