

# Review of: "Mental health in fishing communities: An overview of current knowledge and information gaps for fisheries"

Jyoti Khatri K C

Potential competing interests: No potential competing interests to declare.

The article is well-written, very comprehensive and a novel contribution to new knowledge and mental health literature.

However, there are few shortcomings, the result section is not detailed and only briefly captures the qualitative findings. In the discussion section, although the geographic locations are discussed with relevant literature, critical analysis of findings is missing as least is discussed on socio-economic and cultural aspects contributing to mental health of fishers.
