BBMP

National Cancer Institute

Source

National Cancer Institute. *BBMP*. NCI Thesaurus. Code C44333.

A solid, white, organo-halide carcinogen with a musty odor that consists for 78% of 2,2-Bis(Bromomethyl)-1,3-Propanediol. BBMP is used in industry as a flame retardant in unsaturated polyester resins, in molded products and in rigid polyurethane foam. BBMP is mutagenic and carcinogenic in animals and is reasonably anticipated to be a human carcinogen. (NCI05)
