Potential competing interests: No potential competing interests to declare.

Each of these cases should be categorized and compared differently. For instance, Blockchain and AI are technologies, while cryptocurrency is a product of Blockchain. Comparing all in a single category is like comparing trees with their fruits, which scientifically undermines the value of the content.

Hypotheses have generalization and causality issues. They need to be more specific and should clearly suggest a causal relationship.

The literature review does not cite any studies.

It is also unclear how the research participants were selected.

This study lacks a theoretical framework that aligns with the constructs being examined.
