Potential competing interests: No potential competing interests to declare.

This paper is a well-organized and structured in terms of the study conducted, the author has considered conventional IoT setting and made a comparison.

The only few drawbacks of the paper are as follows:

1. The Author could have considered latest studies as well considering the last 5 years for the study.
2. There could be more detail mathematical and diagrammatical representations of all those values obtained and presented in the paper.
3. The ideology is well described, yet the solution of to the drawback of the study can be elaborated.
4. Future works of the study can be mentioned in order to understand better about what can be done further.
5. A lot of theoretical explanations is provided for the conventional techniques which can be short and highlighting the required.

Overall, the paper is good to be considered for publication after few tweaks of mentioned and is a good article for the upcoming development keeping in mind of the settings.
