# Enokizumab

National Cancer Institute

## Source

National Cancer Institute. *Enokizumab*. NCI Thesaurus. Code C97929.

A humanized monoclonal antibody directed against the cytokine interleukin-9 (IL-9), with potential immunomodulating activity. Upon administration, enokizumab binds to and blocks the activity of IL-9, thereby preventing IL-9-mediated effects. IL-9, a T-helper cell type 2-derived cytokine, is involved in airway inflammation and hyperreactivity.
