DPT/Typhoid/Staphylococcus aureus/Paratyphoid A/Paratyphoid B Vaccine

National Cancer Institute

Source

National Cancer Institute. *DPT/Typhoid/Staphylococcus aureus/Paratyphoid A/Paratyphoid B Vaccine*. NCI Thesaurus. Code C120214.

A proprietary lipid emulsion containing five vaccines: diphtheria, pertussis, tetanus (DPT), typhoid, Staphylococcus aureus, paratyphoid A and paratyphoid B, with potential immunostimulating activity. Subcutaneous administration of the DPT/typhoid/Staphylococcus aureus/paratyphoid A/paratyphoid B vaccine activates the immune system and may both abrogate tumor-induced immune tolerance and induce an antitumor immune response, which may eradicate the tumor.
