Granulocyte-Macrophage Colony-Stimulating Factor Receptor Subunit Alpha

National Cancer Institute

Source

National Cancer Institute. *Granulocyte-Macrophage Colony-Stimulating Factor Receptor Subunit Alpha*. NCI Thesaurus. Code C39272.

Granulocyte-macrophage colony-stimulating factor receptor subunit alpha (400 aa, ~46 kDa) is encoded by the human CSF2RA gene. This protein is involved in the production, differentiation, and activation of both granulocytes and macrophages.
